meet warren

AI financial planning, built for retirement in the UK.

What you need to write about Meet Warren: who we are, what the product does, the numbers, story ideas, founder bios and images you can use. For anything else, contact Isa Gibson at isa@meetwarren.co.uk.

Founded 2025 **Based in** London **Available in** the UK only **Backed by** Founders Factory **Plans generated** 3,100+

About Meet Warren

No jargon, no advice, no hidden agenda.

Use these descriptions as they are or edit them to fit. Each one keeps the line that Meet Warren does not give financial advice; please keep that meaning in anything you publish.

ONE LINE

Meet Warren is a UK AI financial planning platform that helps people visualise, understand and test their path to retirement.

~ 50 WORDS

Meet Warren is an AI financial planning platform. Built for the UK, it specialises in mapping the path to retirement. It's a fast, flexible way to build your own financial plan, a task that has traditionally been cumbersome or out of reach. Warren, your AI planning companion, helps you think through options and compare scenarios.

~ 100 WORDS

Meet Warren is a UK AI financial planning platform specialising in retirement planning, designed to make financial planning clear and accessible. Warren, your AI planning companion, helps you build a plan around your situation, goals and priorities. It draws on a bespoke UK financial knowledge base, then runs deterministic cash-flow calculations (non-AI maths) to build and sense-check your model. You can visualise your finances, compare scenarios and get alerts when something relevant changes. Meet Warren was founded in 2025, has generated over 3,100 plans and is backed by Founders Factory. It does not provide financial advice. More at meetwarren.co.uk.

BOILERPLATE · FOR THE END OF A PRESS RELEASE

About Meet Warren

Meet Warren is an agentic AI personal finance platform built for the UK, specialising in retirement planning. Warren, its AI agent, helps people build a personal financial plan that evolves with them. AI-assisted planning means you can do it yourself, without doing it alone. No jargon, no advice, no hidden agenda. Founded in London in 2025, Meet Warren has generated over 3,100 plans and is backed by Founders Factory. Meet Warren provides information, modelling and scenarios to support people's own decisions; it does not provide financial advice or recommendations. For more information, visit meetwarren.co.uk.

How it works and what you get

Warren is an AI agent that interviews people by voice or chat, builds a financial model that stays with them and keeps it up to date. Meet Warren calls this category consumer-facing AI financial planning.

1

Context and goals

Warren starts with a private conversation, by voice or chat, about where you are now, where you want to get to and what matters most.

2

UK rules and facts

It gathers the relevant rules, guidance and policy from Meet Warren's own UK financial knowledge base, built from over 7,700 facts sourced from gov.uk.

3

Deterministic maths

It builds your plan with deterministic cash-flow calculations (non-AI maths), checking its work along the way.

4

A model you can test

Warren brings it together in a model you can stress-test with what-if scenarios, such as retiring earlier or a fall in markets.

What you get

The dashboard

A clear, dynamic dashboard to visualise your finances, test what-if scenarios and track progress.

The agent

Warren is available throughout the dashboard. Ask financial questions, edit your plan, run calculations and understand your options.

Background monitoring

Warren keeps an eye on your plan, market movements and UK policy changes, including tax. You get a weekly personal news briefing and alerts when something relevant changes.

Products

PERSONAL

Meet Warren

An AI financial planning tool for individuals and households, free to start. It begins with a short private consultation by voice or chat, then builds a cash-flow model covering pensions, ISAs, investments, property, mortgages and income. People can compare retirement dates and drawdown strategies, plan as a couple and explore priority-ordered next steps. Runs in a web browser. Pro is £149 a year.

EMPLOYERS

Meet Warren for Teams

A workplace financial wellbeing benefit that gives employees private, individual access to Warren, as an AI alternative to ad-hoc human financial coaching. No payroll integration or bank connection needed. Employers see only anonymised, aggregate engagement data, never individual plans.

FINANCIAL ADVISERS

Horizon

A separate AI-assisted cash-flow modelling tool for regulated UK financial advisers. It helps advisers build client-ready models and spot planning opportunities across tax, pensions and inheritance tax from prospect data, in minutes.

What Meet Warren is not

Meet Warren provides modelling, information and decision support. It does not assess suitability, recommend financial products or provide regulated financial advice. It is not a bank, broker, lender, insurer, robo-adviser or regulated financial adviser.

Who it's for

Meet Warren is built for UK households, especially people thinking about retirement who have several moving parts to keep track of. It suits people who want to understand their position before, between or alongside conversations with a regulated adviser.

People who tend to get the most from it

- Households with a mix of workplace and personal pensions, SIPPs, ISAs, savings, property or a mortgage
- People wondering when work could become optional and what they could spend in retirement
- Couples planning together, with different pensions, incomes and retirement dates
- People weighing a big decision, such as overpaying a mortgage or changing jobs
- People who use spreadsheets or general AI chatbots for money questions and want something that remembers their situation

Typical users

Mostly UK adults from their late 30s upwards, with meaningful but complex finances, working out when and how they could retire.

Approaching retirement | Pensions and ISAs | Couples and families | Homeowners | Self-employed and contractors | Spreadsheet planners | Practical AI users

Regulated UK financial advisers use Horizon, Meet Warren's cash-flow modelling tool for advice firms.

The story

Founder and CEO Dmytro ("Dima") Tarasenko started Meet Warren after struggling to get a straight answer to a simple question about his own finances.

The problem. Financial planning is expensive, time-consuming and largely out of reach for anyone without a six-figure portfolio. Independent financial advisers typically charge around £200 an hour, DIY spreadsheets go stale, and generic AI chatbots tend to tell people what they already know, and have been known to get things badly wrong.

The response. Financial planning is detailed, personal and specific, and Meet Warren believes the UK deserves a specialised tool built for the job. The result is Warren: an agentic AI that interviews people by voice, builds a financial model that stays with them and keeps it updated over time.

> "I built Meet Warren because I couldn't get a straight answer to a simple question: will I be okay, financially? I wasn't looking for an adviser. I just wanted to see my actual financial picture: what happens if I keep going like this, and what changes if I make different decisions."
>
> Dima Tarasenko, Founder and CEO

MISSION

To use artificial intelligence to dramatically improve UK consumers' access to expert-level financial planning, and to give our users best-in-class retirement planning tools so they can make confident decisions and feel at peace with their money.

VISION

A future where good financial planning isn't a privilege reserved for the wealthy or the patient, but a tool everyone has in their pocket.

What we believe

> "Good financial planning is reserved for the wealthy. That doesn't feel right."

> "Everyone deserves clarity about their financial future."

> "Despite incredible technological innovation over the past 20 years, the financial planning world hasn't changed significantly. Improvements have happened in the back office, not in what consumers get. We want to help fix that."

> "Humans struggle with long-term thinking. Brits struggle to talk about money. Put the two together and it's no wonder long-term planning feels out of reach. By lowering the barrier to entry, we want to help Brits think not just confidently, but aspirationally, about their financial future."

Our values

1:1

Financial services are full of one-size-fits-all solutions, but everyone's situation is different. We want each person's experience with Warren to be their own.

Education first

Warren doesn't tell you what to do. The point is to do it yourself, just never alone, with the information, support and space to make decisions that used to feel daunting.

Nothing in red

Life happens, and being on track isn't always easy. We aim to reduce anxiety about money, not add to it, by showing positive, forward-moving options to explore.

Built for the UK

We're based in London, only available in the UK, and work hard on UK-specific financial questions. In a world of global, generic AI, that is neither the default nor easy.

Judgement-free

British culture discourages talking openly about money. Warren is an algorithm, so you can set social norms aside and talk openly about your finances.

Privacy and security

Your financial information is treated with care and never shared with third parties without your consent.

Human in control

You hold the wheel. Modelling your options and making your decision are two different jobs, and only one of them should ever belong to a machine.

Fact sheet

Legal entity **FF WealthCo Ltd, trading as Meet Warren**	Headquarters **London, UK**	Registered address **2 Arundel St, Temple, London WC2R 3DA**	Founded **2025**

Milestones

Mid 2025

Meet Warren is founded in London, backed by Founders Factory.

October 2025

Public beta launches.

November 2025

An educational anti-misinformation social media campaign runs in the lead-up to the Autumn Budget. On Budget day, users receive a personal Budget breakdown within four hours of the announcement.

- **Early 2026**

  Meet Warren 3.0, a major product update.

- **April 2026**

  Dima speaks on the panel The Fin.Tech Growth Playbook: Capital, Compliance & Competitive Edge at the Fintech Marketing Community's Europe conference in London.

- **May 2026**

  Named at number 38 in TechRound's Fintech 50.

- **June 2026**

  Meet Warren 3.0 is featured on Product Hunt, reaching number 6 on the daily leaderboard.
  Assets modelled in Warren plans pass £200m.

- **July 2026**

  Over 3,000 plans generated. Meet Warren expands from a consumer tool into three segments: Personal, Employer and Financial Adviser (Horizon).

- **September 2026**

  The consumer product is rebuilt to specialise in retirement planning.

Key numbers

Meet Warren figures as of November 2026.

3,100+
unique financial plans generated

£400m+
in assets modelled in Warren plans

500+ hours
of voice calls with Warren

7,700+
UK financial facts from gov.uk in Warren's knowledge base

8 years
of financial modelling per user, on average

24
actionable tips per plan, on average

30%
of users speak to Warren every month

The wider picture

Market figures Meet Warren cites about planning in the UK. Sources available on request.

1 in 2
UK adults don't have a financial plan

2 / 10
average UK "planning ahead" capability score

45%
of Brits say not planning enough for retirement was their biggest financial mistake

The Meet Warren team

Dima Tarasenko

Founder and CEO

ClearScore · Entrepreneur First · Imperial College

SHORT BIO

Dima Tarasenko is the founder and CEO of Meet Warren. Born and raised in Ukraine, he studied at Imperial College, worked at ClearScore and went through Entrepreneur First.

LONG BIO

Dmytro ("Dima") Tarasenko is the founder and CEO of Meet Warren, the London-based AI financial planning platform. Born and raised in Ukraine, he studied at Imperial College and spent years in financial technology, including at ClearScore, before joining Entrepreneur First. He started Meet Warren in 2025 after struggling to get a straight answer to a simple question about his own finances, and set out to make the kind of financial planning usually reserved for the wealthy available to far more people. Under his leadership, Meet Warren has generated over 3,100 plans, been named in TechRound's Fintech 50 and expanded into tools for employers and financial advisers.

FEATURED IDEA · OPINION AND RESEARCH

What AI is good at with your money, and what it shouldn't touch (yet)

Millions of people already ask chatbots about money. Meet Warren has spent a year building AI for financial planning and has learned, sometimes the hard way, where it helps and where it doesn't belong. A two-part piece: an opinion column from Dima, and a research deep-dive from the engineering team with the data behind it.

Where AI shouldn't be trusted (yet)

- ✕ **Doing the maths.** Some calculations are better custom-built, like recipes. Meet Warren's first models were unique AI-written code for every user; they worked until they didn't, and couldn't answer a simple "what if I retire at 60?". Analysing 1,682 of them showed 8 patterns covered 70% of models, so the team replaced them with a deterministic financial engine. The AI now decides the structure; the engine does the sums.
- ✕ **Getting into your bank account.** Warren doesn't connect to bank or pension accounts, and doesn't move, manage or invest money. People share what they choose. Until the safeguards catch up, that line matters.
- ✕ **Giving advice.** Deciding what's suitable for someone, or recommending products, is regulated advice. Meet Warren's Control Plane checks every AI response to keep it to guidance, and the company has shared its guardrails with the FCA's Perimeter Team.

What AI does really well

- ✓ **Asking the questions.** A patient, judgement-free interviewer that gathers a messy financial picture by voice. People have spent more than 500 hours on calls with Warren.
- ✓ **Explaining the rules.** Turning UK tax and pension rules into plain English, with sources. Warren draws on 7,753 facts from gov.uk, and when it decides to look something up, it's the right call 97% of the time.
- ✓ **Turning questions into scenarios.** Translating "could we both stop at 60?" into a model the engine can run and compare.
- ✓ **Noticing what's relevant.** Reading each person's context against market and policy news, and staying quiet unless something matters to them.

PART 1 · OPINION

Dima on why the honest answer to "can AI do your finances?" is "some of it", and why saying no to bank access and advice is a product decision, not a limitation.

PART 2 · RESEARCH

The engineering team on the evidence: the 1,682-model analysis, the knowledge base evaluation and how the guardrails work in practice.

BACKGROUND READING

How we built a cashflow engine · How we made Warren better at UK financial questions

AI and technology

ENGINEERING

Why we stopped letting the AI write the maths

Meet Warren's first plans were generated as unique code for each user. It was impressive and impossible to edit. The team analysed 1,682 production models, found that 8 patterns covered 70% of them, and built a deterministic engine where the AI defines the structure and the engine computes the numbers.

1,682 models analysed · 8 patterns covered 70%, 11 covered 80% · 73 series and 101 event types · Read the research

KNOWLEDGE AND ACCURACY

Teaching an AI the UK rulebook

General chatbots aren't built around UK financial rules. Meet Warren built its own source of truth from gov.uk, broken into small checked facts that track when rules change, with people curating the results because a 95% accurate pipeline would still mean hundreds of wrong answers.

746 concepts · 7,753 facts from gov.uk · 97% precision on knowledge base calls · Read the research

AGENTIC AI

An AI agent that stays quiet unless it matters

Most money apps go silent after sign-up, or nag. Warren reads each person's financial context every day and only gets in touch when it has something useful to say, from Budget changes to market moves.

Daily checks against each plan · Weekly personal news briefings · Read the research

SAFETY AND REGULATION

Keeping an AI on the right side of the advice line

How a Control Plane coordinates every AI response so Warren gives guidance, not advice, and what Meet Warren learned from sharing its guardrails with the FCA's Perimeter Team.

Every response checked · Guardrails shared with the FCA's Perimeter Team · Non-advisory by design

Money, retirement and the business

AI AND PERSONAL FINANCE

Can AI help Brits plan for retirement?

More than half of people already ask generic chatbots about money. What changes when an AI is built specifically for UK planning, uses a knowledge base of UK rules, and leaves the maths to deterministic calculations instead of a language model?

55% use ChatGPT for personal finance questions · 7,700+ gov.uk facts in Warren's knowledge base · 3,100+ plans generated

ADVISERS AND AI

AI won't replace financial advisers. Here's where it fits.

The founder many assume is building an AI to replace advisers explains why it won't, and where the real gap is: the early stage of the journey that nobody is serving, before someone is ready for, or can afford, regulated advice.

Advisers typically charge around £200 an hour · 1 in 2 UK adults have no financial plan · Horizon, Meet Warren's tool for advisers

RETIREMENT

Why retirement spending capacity is the number to watch

Most people come to retirement planning with fear questions: will I run out, will I be okay? Meet Warren argues people have a right to plan aspirationally, and that retirement spending capacity (RSC), what you could sustainably spend each year, is more useful than staring at the size of a pension pot.

45% say not planning enough for retirement was their biggest mistake · 2 / 10 average "planning ahead" score

MONEY AND CULTURE

Why Brits find it easier to talk about money with an algorithm

British culture discourages talking openly about money. Talking to Warren by voice removes the social awkwardness, and people use it: hundreds of hours of voice conversations so far.

500+ hours of voice calls with Warren · 30% of users speak to Warren every month

STARTUP AND FUNDING

From idea to seed round in a year

Founded in 2025 with Founders Factory, Meet Warren raised £300,000 at pre-seed, launched a public beta, grew to over 3,100 plans and is now entering a seed round. A story about building a new consumer category in UK fintech.

£300,000 pre-seed · TechRound Fintech 50 · Product Hunt number 6 · Entering seed

FOUNDER STORY

"I thought I was building one thing. Now I'm building this."

From a general money tool to employers and advisers, then a deliberate decision to specialise in retirement: what Dima learned from users along the way, and why narrowing the focus mattered.

Public beta October 2025 · three segments July 2026 · retirement focus September 2026

FAQs

Is Meet Warren a financial adviser?

No. Meet Warren provides information, modelling and scenarios to support people's own decisions. It does not assess suitability, recommend financial products or provide regulated financial advice. It is not authorised or regulated by the FCA.

How do you stop the AI giving advice?

We impose strict guardrails on our AI systems. Our Control Plane coordinates all AI responses to ensure we provide solely guidance, without straying into advice. We've shared our guardrails with the FCA's Perimeter Team, and we constantly evaluate and improve our systems.

Why is it deliberately non-advisory?

Meet Warren provides modelling, education and structured information, and people keep full control of their decisions. The company sees this as removing conflicts of interest and building trust, in line with regulators' growing focus on transparency and consumer empowerment.

Does the AI do the calculations?

No. The AI gathers information and decides how a plan should be structured. The numbers come from Meet Warren's deterministic financial engine, which gives the same result every time from the same inputs. How the engine was built.

Where does Warren get its information?

From a knowledge base of 7,753 facts about UK financial rules, sourced from gov.uk, checked by people and updated when rules change. How the knowledge base works.

Does Warren connect to people's bank accounts?

No. People share what they choose, by talking to Warren or uploading documents. Meet Warren doesn't connect to bank or pension accounts, and never moves, manages or invests money.

What happens to people's data?

It's stored with industry-standard encryption. Meet Warren doesn't sell it or share it with advertisers, and AI model providers are prohibited from using it for training. People can ask for their data to be deleted at any time. More at meetwarren.co.uk/security.

Is it just retirement planning now?

Since September 2026 the consumer product has specialised in retirement planning, because that's where people told us they needed the most help. People still use it to explore other big decisions along the way, such as overpaying a mortgage or changing jobs. Meet Warren for Teams and Horizon serve employers and financial advisers.

How much does it cost?

The first consultation with Warren is free. The full plan, financial model and saved scenarios are part of Pro, at £149 a year. Current prices are on meetwarren.co.uk/pricing.

How accurate are the projections?

They are estimates based on what people share and on stated assumptions, which people can see and change. Forecasts are not a reliable indicator of future performance.

Who backs Meet Warren?

Meet Warren was founded in 2025 with Founders Factory, the London venture studio. It raised £300,000 at pre-seed and is entering a seed round.

Can I try it?

Yes. Anyone can explore a demo plan for a fictional household at meetwarren.co.uk/app/tour. For a guided demo or press access to Pro, contact Isa Gibson.

Writing about us

A quick guide to getting the names and descriptions right.

Our names

- **Meet Warren** is the company and the product. Two words, both capitalised.
- **Warren** is the AI planning companion people talk to inside Meet Warren: "she asked Warren about drawing her pension".
- **Pro** is the paid plan. **Horizon** is the tool for financial advisers.
- Please don't write Warren AI, WarrenAI, Warren.AI, Meet Warren AI or MeetWarren, and don't call Warren a bot, an adviser or a robo-adviser.

Describing what it does

- Good descriptions: AI planning tool, AI financial planning platform, financial planning workspace, scenario-modelling tool, planning companion.
- Warren helps people explore, model, compare and understand. It does not tell people what to do or recommend products.
- Projections are estimates based on what people share and on stated assumptions, not predictions.
- Where a product image or figure appears, please include: "Not financial advice."

Glossary

Cash-flow model

A year-by-year projection of money coming in and going out, used to see how savings, pensions and spending could change over time.

Deterministic calculation

Maths that gives the same answer every time from the same inputs. Meet Warren uses it for its numbers, so the AI explains and gathers information but doesn't do the arithmetic.

Agentic AI

AI that can take steps on a person's behalf, such as asking follow-up questions, updating a plan or running a calculation, instead of only answering one message at a time.

Drawdown

Taking money from a pension pot gradually in retirement while the rest stays invested.

Scenario

A "what if" version of a plan, such as retiring two years earlier, to compare against the base plan.

Assets modelled

The total value of the savings, investments, pensions and property people have included in their Warren plans. Meet Warren does not hold or manage this money.
